***This course is presented by
Health Education Design
Solutions, Inc. and Sweet Water
Medics***

The textbook for this course is the AAOS Critical Care Transport text published by Jones and Bartlett Publishing. Books can be purchased directly from www.jblearning.com with a 20% discount. The link and discount code will be provided after registration is paid.

Critical Care transport is at the forefront of the ever-changing world of modern health care. Driven by cost containment, insurers, clinical advancements, new regulations, and a continual shift toward specialty centers, the field of critical care transport will continue to grow. Transports once managed by physicians and nurses now include EMT's and paramedics. This expansion of EMS into critical care transport brings with it a pressing need for formal education and clinical preparation. This education will aid all providers in bridging the gap from their respective educational foundations to the level of critical care transport professional.

Approximately 60% of the didactic content will be presented through an online learning management system and 40% classroom and skills lab. Skills labs will include the use of medical simulation and multiple scenarios. The classroom and skills lab portions will be held **Jan 9-13, 2017** and the online portions need to be completed prior to the live sessions. The on line portions will be available Sep 14, 2016

There will be a written evaluation for each module as well as a comprehensive final exam and required skill competency demonstrations.

The New Mexico EMS Bureau has approved this course for 92 continuing education credits. The North Dakota EMS Office has approved this course for 92 continuing education credits.

This course is approved for FP-C or CCP-C credential recertification. This course is not endorsed or sponsored by the BCCTPC
